- Build pixel-perfect, buttery smooth UIs across both mobile platforms.
- Leverage native APIs for deep integrations with both platforms.
- Diagnose and fix bugs and performance bottlenecks for performance that feels native.

- Reach out to the open source community to encourage and help implement mission-critical software fixes—React Native moves fast and often breaks things.
- Maintain code and write automated tests to ensure the product is of the highest quality.
- Transition existing React web apps to React Native.
- Managing large and complex projects or multiple components with smooth implementation and testing of application.
- Cooperating & communicating with other team members for efficient management works.
- Delivering and implementing the project as per scheduled milestones.
- Designing, Developing, Implementation and troubleshooting of applications.
- Providing suggestions to manage and enhance work culture of Company.
- Designed and developed base classes, framework classes and re-usable components.
- Involved in Understanding functional specifications and developing creative solutions to meet business requirements.
- Highly Curious about new front-end development technologies and thoroughly mastering them with a keen awareness of new industry developments and the evolution of programming solutions.
- Worked closely with the project management and marketing team to completely define specifications to help ensure project acceptance.

Skills
- Firm grasp of the JavaScript language and its nuances, including ES6+ syntax
- Knowledge of functional or object-oriented programming
- Ability to write well-documented, clean JavaScript code
- Rock solid at working with third-party dependencies and debugging dependency conflicts
- Familiarity with native build tools, like XCode, Gradle Android Studio, IntelliJ
- Understanding of REST APIs, the document request model, and offline storage
- Experience with automated testing suites, like Jest or Mocha
- Used the Code Push for deployment of application on both app stores for hot fixes.

Senior Mobile Applications Developer (Android + IOS + React Native + Flutter)

YAS Berlin Area, Germany

Sub office in G11 Islamabad.

March 2018 to June 2019

Responsibilities:

React Native:

- Diagnose and fix bugs and performance bottlenecks for performance that feels native
- Used the Redux and MobX for sate management and as a middleware
- Develop the custom components for custom UI design
- Multi language support for both of the platform IOS & Android
- Used the React Navigation like Stack Navigator to switch among different screens
- Debug the react native code with native debugger and third parties' tools
- Worked among teams and manage the code on Github and review the code of other developers
- Took initiative in learning react native and went on to successfully develop various features under minimal supervision.

Flutter:

- Setup the flutter SDK for both Android and IOS
- Create the Widgets for custom design and UI
- Worked with different Widgets to achieve the design goal like list view, Dropdown, Martial App, Scaffold
- Design the Parsing module for the JSON data for Remoter APIs
- Worked with the Shared Preference module to save the data in local memory
- Used the DIO package to worked with Remote APIs
- Worked with image picker and upload to the server with DIO package
- Build pixel-perfect, buttery smooth UIs across both mobile platforms
- Used the Navigator widget and define routes for screens navigations

Android:

- Support our Android client, helping find ways to architect and build new features in efficient, extensible, and maintainable ways.
- Work with a large team of developers and architects across a range of languages and platforms on cross-functional Agile sprint teams and followed SCRUM and KANBAN.
- Push the boundaries of what's possible with creative solutions to hard, mobile-centric problems like synchronization, asynchronous APIs, and leveraging offline device capabilities.
- Create intuitive, custom UI controls and interfaces that match our great user experience.
- Help mentor and coach other developers on best practices, standards, design patterns and other items.
- Research the latest technologies, test, implement, and report back to the team on what you've discovered.
- Lead and mentor a team of passionate software engineers
- Design and deliver awesome SDKs and apps to millions of users
- Drive best practice for automation, continuous integration and continuous delivery
- Partner with our product, design and business counterparts to shape the requirements and roadmap
- Partner with our architects on API and system design
- Contribute to inner and open source projects
- Learn new things, share best practices and improve processes
- Architect and develop new features in accordance with our product roadmap
- Provide accurate estimates for milestones on our product roadmap
- Exercise leadership in project architecture & code quality
